

Heathfield & Co

SANIPEXGROUP

LIGHT
BEYOND
DESIGN.

SANIPEXGROUP

TRANSFORMING SPACES.

From fluid organic forms to industrial styling, the new lighting collection from SANIPEX GROUP comprises of a carefully curated selection of unique products that bridge the gap between art installation and interior design.

Blending aesthetic principles with technological innovation, every piece is crafted to both command attention and enhance the space in which it is placed, casting distinctive lighting effects to create a unique atmosphere and distinctive ambience indoors and out.

Representing innovative European brands, each selected for their quality, craftsmanship, and directional design approach, every product works as a stunning centrepiece across a variety of settings, from residential homes and restaurants through to hotels and retail premises.

Using the finest materials, including handblown Murano glass, textural ceramics, metal mesh, wood, and brass, the pieces in our lighting collection are expertly made by master craftsmen in Europe with a preference given to the use of local materials, resulting in exceptional pieces that will take pride of place in any space.

Orla

Heathfield & Co

Heathfield & Co creates decorative lighting defined by craftsmanship, natural materials, and refined design. Blending form and function, each piece is thoughtfully crafted to enhance interiors while standing as a statement in its own right. With a focus on quality and timeless appeal, the collection brings character, warmth, and sophistication to any space.

The Story of Heathfield & Co

Heathfield & Co has been a trusted supplier to renowned interior designers for over 40 years. It began when founder Andrew Watson was searching for property development opportunities, and came across a lampshade maker's workshop in Bromley, London. Charmed and inspired by the craftsmanship, he scrapped his plans to renovate the building and instead chose to save the business and preserve the heritage of the craft.

After developing an understanding for the industry, Andrew then began fostering relationships with leading department stores and quickly became one of the country's most notable lampshade suppliers. By the early 2000s, Heathfield & Co had caught the attention of interior designers looking for quality, design-led lighting that could be custom-tailored, without costing the earth.

Today, Andrew is joined by a close-knit team of family members and long-standing colleagues in their bustling Kent workshop. As well as continuing to work closely with interior designers and tastemakers on custom projects, the team have also translated their trade offering into carefully curated collections that are ready to shop.

These pieces are a culmination of decades worth of lighting knowledge and unabating design development, retaining the same expert quality, craftsmanship and attention to detail that Heathfield & Co is known for.

Design & Development

Design Process

Design development is approached with meticulous attention to detail, ensuring every element is refined until it achieves the desired outcome. Equal importance is placed on both form and function, guaranteeing that each piece not only looks exceptional but performs flawlessly.

Each design begins with an inspiring material or shape, evolving through a collaborative and exploratory process. Prototyping, experimentation, and refinement play a central role, allowing each piece to develop organically rather than following a rigid or standardised path.

Maintaining flexibility within the manufacturing process allows for adaptability and precision. This approach supports the creation of high-quality lighting while also enabling customisation to meet individual specifications.

The Result

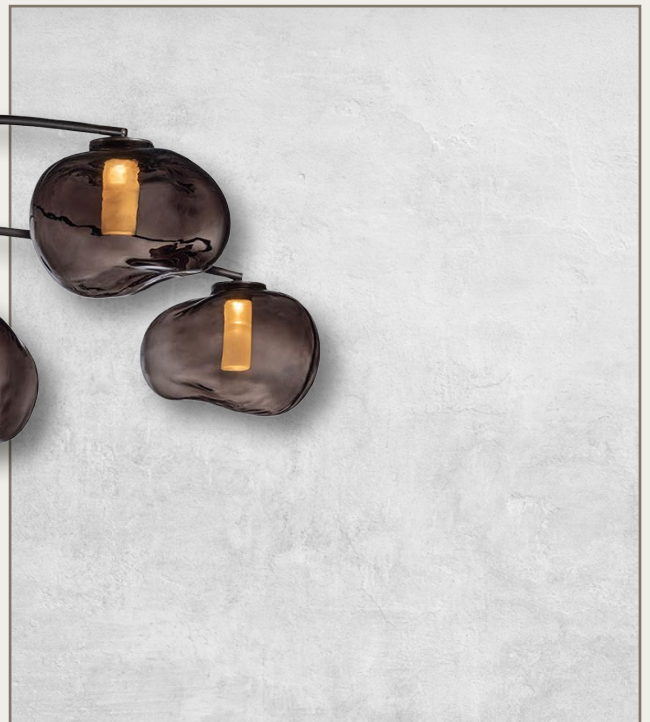

While design remains a core focus, it is the development process that defines the final product. This involves sourcing skilled artisans, testing materials, building prototypes, and continuously refining each design until it achieves the right balance of appearance, feel, and functionality.

Shortcuts are never taken when quality is at risk, and commitments are only made when they can be fulfilled. Respect for design is matched by a commitment to quality, supported by decades of experience in refining this approach.

10-Year Guarantee

A high standard of design and quality underpins every product. A 10-year guarantee is offered across all lighting, covering product failure and reflecting confidence in long-term performance.

Installations

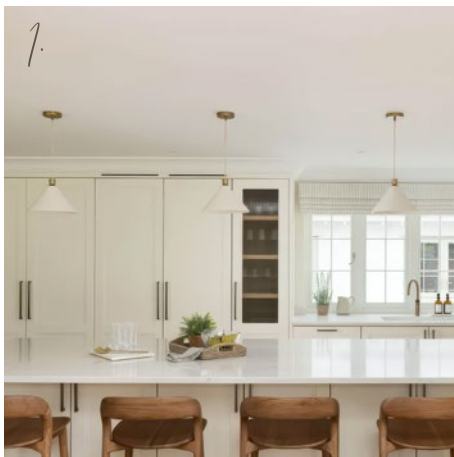

Established in 2015, a dedicated installation studio designs and manufactures striking lighting installations that evoke a sense of wonder, energy and movement. Inspired by the natural world, these pieces translate phenomena into sculptural forms—merging light, scale and structure to transform interior spaces.

Each installation is handmade in the UK, with careful direction across every stage of the process, from initial concept and design through to prototyping and final installation. The result is a considered, sculptural approach to lighting that elevates and redefines the spaces it inhabits.

Lighting Guides

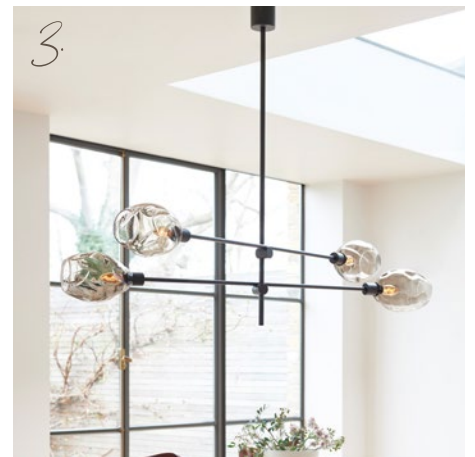

Thoughtfully designed lighting transforms how a space is experienced. From layering light to selecting the right finishes, Heathfield & Co provides guidance to create balanced, functional, and atmospheric interiors.

Your Guide to
Kitchen Lighting

Your Guide to
Bathroom Lighting

Your Guide to
Dining Room Lighting

Your Guide to Kitchen Island Lighting

Kitchen island lighting should combine practicality with visual impact, helping the space function efficiently while creating a central design feature within the kitchen. Pendant lights are a popular choice, offering focused task lighting as well as decorative appeal. Larger islands often suit a series of evenly spaced pendants, while smaller spaces may benefit from a single statement fixture or compact cluster.

Scale and positioning are important to achieving a balanced look. Lighting should feel proportionate to the size of the island and be suspended at a height that provides effective illumination without disrupting sightlines across the room.

Layered lighting can also enhance the atmosphere of the kitchen, combining task, ambient, and accent lighting to create flexibility throughout the day. Dimmable lighting and warm LED tones are often preferred for a softer, more inviting feel.

Contemporary kitchen lighting trends favour clean forms, sculptural silhouettes, and natural materials that add warmth and texture while complementing the wider interior scheme.

Your Guide to Bathroom Lighting

Bathroom lighting should balance practicality, safety, and atmosphere to create a space that feels both functional and considered. A layered approach is often the most effective, combining ambient, task, and accent lighting to suit different routines throughout the day. Ceiling lighting provides overall illumination, while wall lights positioned around mirrors help reduce shadows and create clearer, more flattering light for daily tasks.

Safety is also an important consideration in bathroom design. Lighting should be selected according to bathroom zones and appropriate IP ratings, ensuring fittings are suitable for areas exposed to moisture and humidity.

Material choice can influence both durability and appearance. Glass, brass, and bronze are commonly used for bathroom lighting due to their ability to withstand humid environments while adding a timeless decorative quality. Frosted or opal glass can also soften the light, creating a calmer, spa-like atmosphere.

Colour temperature plays a key role in shaping the mood of the space. Warmer lighting creates a softer, more relaxing feel, while cooler tones are better suited to task-focused areas such as mirrors and vanity spaces.

Your Guide to Dining Room Lighting

Dining room lighting should create a balance between atmosphere and functionality, helping the space feel inviting while providing practical illumination for dining and entertaining. The dining table is often the focal point of the room, making overhead lighting a key design feature. Pendant lights, chandeliers, or linear fixtures positioned above the table help anchor the space while creating a warm, intimate setting.

The size and shape of the table can influence the lighting arrangement. Longer tables often suit a series of pendants or elongated fixtures, while round tables work well with a single central pendant or clustered lights. Positioning is equally important, with fittings typically suspended low enough to create atmosphere without interrupting sightlines across the table.

Layered lighting can add depth and flexibility to the room. Combining overhead lighting with wall lights or table lamps creates a softer, more considered scheme that can adapt to different occasions throughout the day and evening. Dimmable lighting is especially effective in dining spaces, allowing the atmosphere to shift from bright and practical to relaxed and ambient.

Warm lighting tones are generally preferred, helping to create a comfortable and welcoming environment that complements the wider interior scheme.

INGRESS PROTECTION RATING (IP)

'IP' ratings are used to define levels of sealing effectiveness of electrical enclosures against intrusion from foreign bodies, tools, dirt, moisture and water. This international classification system, when considering outdoor/indoor lighting, largely refers to how waterproof a set of lights, or lighting accessory is. Please see the table below, defined and explained the differences of each IP.

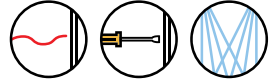

IP20

Protected from touch by fingers and objects greater than 12 mm.
Not protected from liquids.

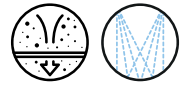

IP44

Protected from tools and small wires greater than 1 mm.
Protected from water spray from any direction.

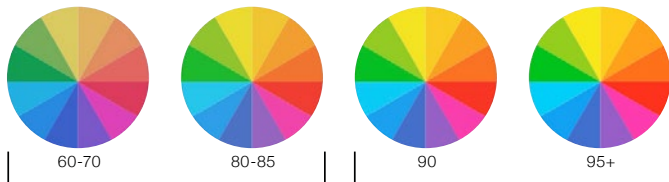

IP54

Protected from limited dust ingress.
Protected from low pressure water jets from any direction.

COLOUR RENDERING INDEX (CRI)

Measures the ability of a light source to accurately reproduce the colours of the object it illuminates.

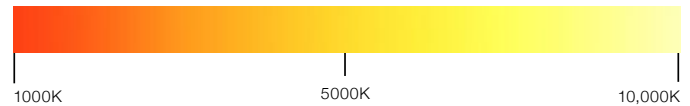

Low CRI (Below 80)
Not Accurate

High CRI (Above 90)
Very Accurate

KELVIN RATING (K)

Indicates the shade of white that is given off by the light source.

LUMENS (LM)

Unit of measurement for the luminous flux. This is the total quantity of visible light emitted by the light source.

POWER (W)

The method of measuring the rate of energy transfer. The more Wattage, the brighter a light is.

VOLTAGE (V)

Voltage is the pressure from an electrical circuit's power source that pushes the current to the light. When the lighting fixture operates at a different voltage, a driver (transformer) is required. **Voltage in the UAE is 230V.**

POWER EQUIVALENCY

LED equivalent wattages to traditional light sources can only be approximate, as they will vary depending on the colour temperature and quality of the bulbs being compared. Incandescent light bulbs are the least energy-efficient light source, with LED Light Bulbs using just 10% of the energy to produce the same amount of light as their incandescent equivalents.
